JPMorgan Chase & Co.
383 Madison Avenue
New York, NY 10179

Re: Executive Director, AI/ML Engineering

Dear Hiring Manager,

I am writing to express my strong interest in the Executive Director, AI/ML position at JPMorgan Chase. As a serial CTO and Y Combinator founder with over a decade of experience architecting AI-powered platforms, distributed systems, and data-driven applications at scale, I am excited by the opportunity to bring my entrepreneurial engineering leadership to one of the world's most consequential financial institutions.

Throughout my career, I have built and led technology organizations from the ground up—most recently as Co-Founder and CTO of CopyCatch.AI, where I define and execute the technology vision for an AI-powered content authentication platform, architecting scalable ML pipelines for content analysis, pattern recognition, and automated detection at enterprise scale. Previously, as CTO of CoVerified (Y Combinator W21), I took a mission-critical campus health management platform from concept through production to a successful exit, leading cross-functional engineering teams, driving applied AI/ML integration for predictive modeling and risk assessment, and building systems that handled sensitive data under strict compliance requirements.

My experience maps directly to the demands of AI/ML leadership at JPMorgan Chase. I have deep hands-on expertise across the modern AI/ML stack—generative AI, computer vision, NLP, predictive modeling—paired with production-grade distributed systems engineering on GCP, AWS, and cloud-native infrastructure. At Henry Ford Health System, I spent four years engineering data-driven applications and ML-powered predictive tools in a HIPAA-regulated

environment, giving me firsthand experience delivering AI in highly regulated, audit-ready settings analogous to financial services. I understand what it takes to ship AI that is not only technically excellent but also compliant, secure, and trustworthy.

What sets me apart is the combination of deep technical capability with executive-level product and business acumen. I have repeatedly aligned technology investments with go-to-market strategy, fundraising milestones, and customer needs. At FlutterFlow, I served as the senior technical partner for enterprise clients across industries, architecting custom AI/ML integrations and directly influencing platform roadmap based on enterprise feedback. I have built engineering cultures, established hiring practices, and mentored teams—the organizational leadership that an Executive Director role demands.

I am particularly drawn to JPMorgan Chase's commitment to being at the forefront of AI innovation in financial services. The scale of data, the complexity of the problems, and the opportunity to drive AI transformation across trading, risk, operations, and client experience represent exactly the kind of high-impact challenge I thrive on. As a New York City resident, I am energized by the prospect of contributing to this mission locally, embedded within JPMorgan's world-class teams.

I would welcome the opportunity to discuss how my experience building AI-powered platforms, leading engineering organizations, and shipping technology at scale can contribute to JPMorgan Chase's AI/ML strategy. Thank you for your time and consideration.

Sincerely,

Frank Albanese
